

Contribution Log and AI-Use Disclosure

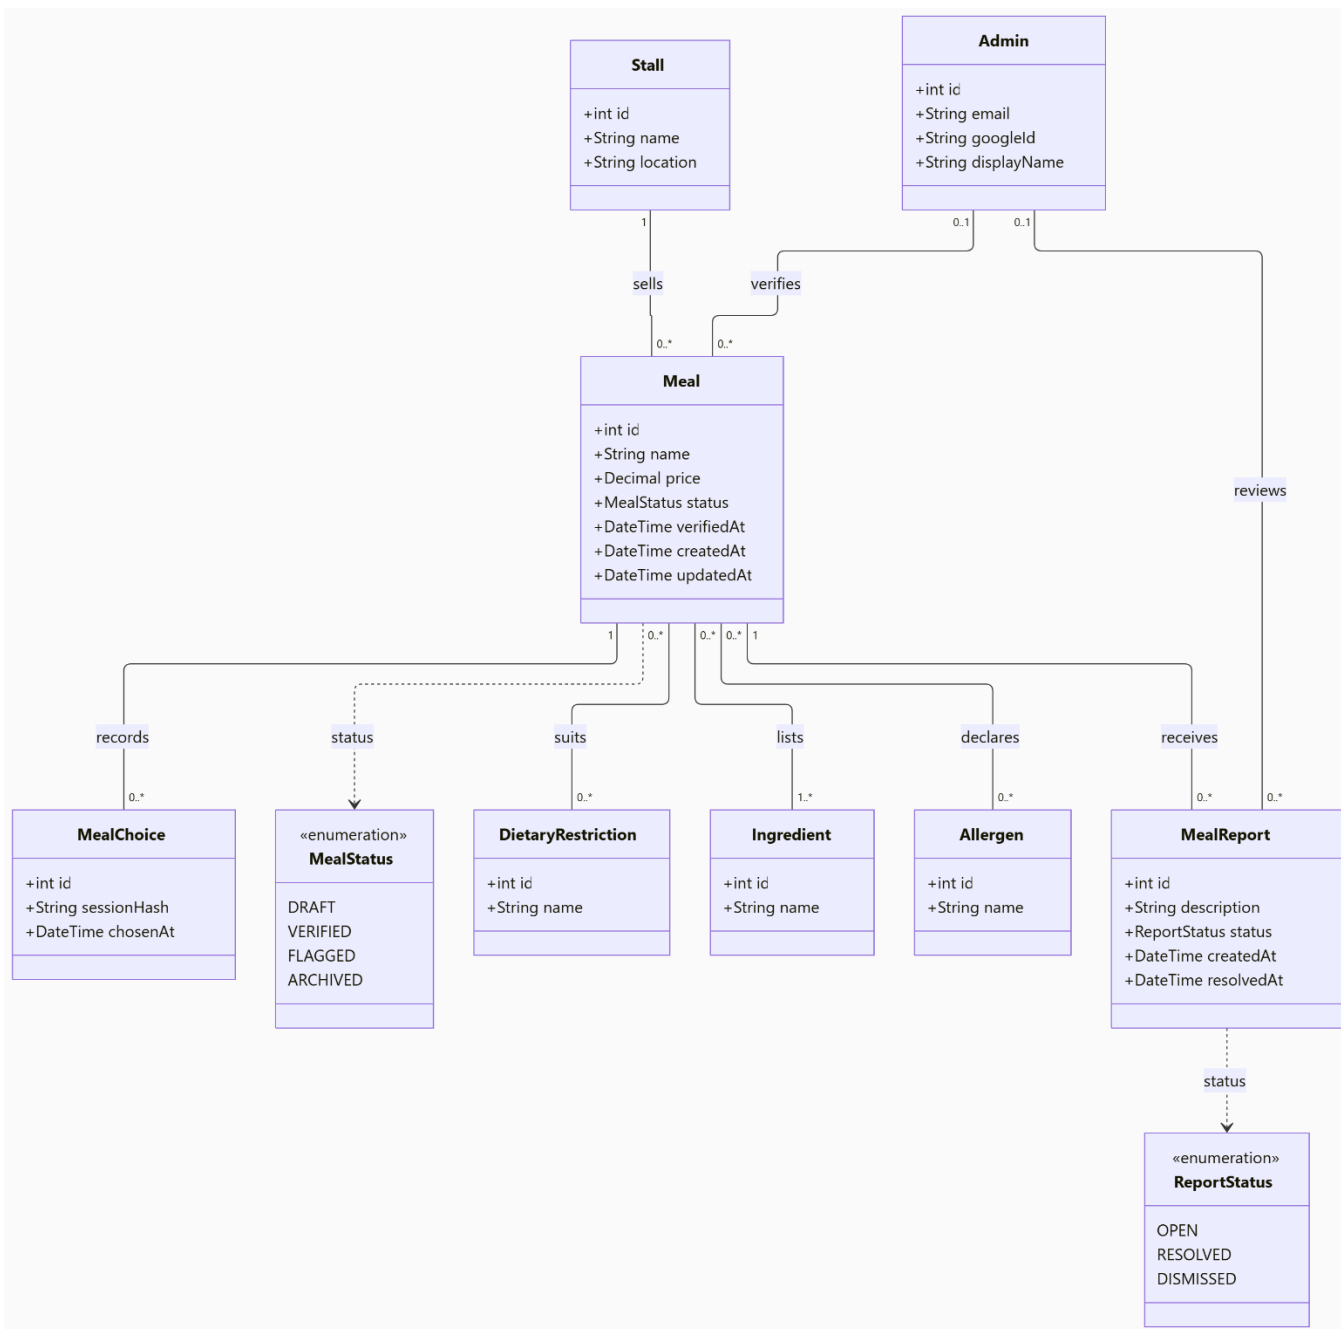

MEMBER	WORK DONE (DIAGRAMS DRAFTED, DIAGRAMS REVIEWED)	COMMIT EVIDENCE (HASHES OR LINKS)	AI TOOLS USED, AND HOW THE OUTPUT WAS CHECKED
Benavides, Louise Jean Angelo	Drafted: Diagram 3 (use case, use-cases.md) and Diagram 6 (class, class.md). Reviewed: ○ Sequence ○ UML component	Repository: edoygobole29-ops/Team-Doy . Commits with message "Benavides" on use-cases.md and class.md .	For Diagrams 2 and 3, I used Claude (Anthropic) chat to draft and fix the Mermaid code for the class and use case diagrams. No other AI tools were used. Claude only helped with Mermaid syntax; the content was mine. I checked the output by mapping each use case to Must-have features M1–M9, confirming actors match Diagram 1, checking that every association shows multiplicity at both ends, and matching MealStatus values to Diagram 7.
Damiar, Marjorie S.	Drafted: Diagram 1 (C4 context, context.md), Diagram 8 (package, packages.md), Diagram 11 (ERD, erd.md). Reviewed: ○ C4 container ○ Activity ○ Class	Commits with message "Damiar" on context.md , packages.md , erd.md .	For the context, package, and ERD diagrams, I used Claude (Anthropic) chat to draft and fix the Mermaid code. No other AI tools were used. Claude only helped with syntax; the content was mine. I checked the output by confirming the people and external systems against the MVP document, confirming the folders match the layers in Diagram 9, and confirming the ERD

			tables and cardinalities match Diagram 6 with PII columns marked.
Gelilio, Dave Angelo	Drafted: Diagram 2 (C4 container, containers.md), Diagram 7 (state machine, state-machine.md), Diagram 9 (component, components.md). Reviewed: ○ C4 system context ○ Package ○ Deployment (Provisional)	Commits with message "Gelilio" on containers.md , state-machine.md , components.md .	For the container, state machine, and component diagrams, I used Claude (Anthropic) chat to draft and fix the Mermaid code. No other AI tools were used. Claude only helped with syntax; the content was mine. I checked the output by confirming every container arrow has intent and protocol, confirming the state names match the class enumeration, and confirming the external services sit behind an adapter interface.
Gobole, John Carl	Drafted: Diagram 4 (activity, activity.md), Diagram 5 (sequence, sequence.md), Diagram 10 (deployment, deployment.md). Reviewed: ○ Use case ○ State machine ○ ERD (draft)	Commits with message "Gobole" on activity.md , sequence.md , deployment.md .	For the activity and sequence diagrams, I used Claude (Anthropic) chat to draft, restyle, and fix the Mermaid code. No other AI tools were used. Claude only helped with syntax and styling; the content was mine. I checked the output by confirming every decision has a guard, confirming the sequence lifelines match the containers, and confirming the deployment diagram is titled Provisional, has a protocol on every path, and shows no secrets or real addresses.
